JOURNAL OF SCIENTIFIC COMPUTING

Vol. 17, Numbers 1–4 **December 2002**

Special Issue: Proceedings of the Fifth International Conference on Spectral and High Order Methods (ICOSHAM-01)

CONTENTS

Foreword 1
Bertil Gustafsson

Invited Talks

hp-Discontinuous Galerkin Finite Element Methods with Least-Squares Stabilization 3
Paul Houston, Max Jensen, and Endre Süli

Local Discontinuous Galerkin Methods for Partial Differential Equations with Higher Order Derivatives 27
Jue Yan and Chi-Wang Shu

Divergence-Free Wavelet Analysis of Turbulent Flows 49
Cem M. Albukrek, Karsten Urban, Dietmar Rempfer, and John L. Lumley

Superconsistent Discretizations 67
Daniele Funaro

Spectral Element Methods for Transitional Flows in Complex Geometries 81
Paul F. Fischer, Gerald W. Kruse, and Francis Loth

Toward Non Commutative Numerical Analysis: High Order Integration in Time 99
Michelle Schatzman

A Fully Automatic *hp*-Adaptivity 117
L. Demkowicz, W. Rachowicz, and Ph. Devloo

A Discontinuous Spectral Element Model for Boussinesq-Type Equations 143
C. Eskilsson and S. J. Sherwin

Contributed and Minisymposium Talks

An Auto-Adaptive Multidomain Spectral Technique for Linear Stability Analysis: Application to Viscous Compressible Flows 153
Eric Serre and Serge Gauthier

Reducing the Effects of Noise in Image Reconstruction 167
Rick Archibald and A. Gelb

Entropy Splitting for High Order Numerical Simulation of Vortex Sound at Low Mach Numbers 181
Bernhard Müller and H. C. Yee

A Robust Spectral Element Method for Simulations of Time-Dependent Viscoelastic Flows, Derived from the Brownian Configuration Field Method 191
Cédric Chauvière and Robert G. Owens

Preconditioned Uzawa Algorithm for the Velocity-Pressure-Stress Formulation of Viscoelastic Flow Problems 201
X. Escriva, E. Leriche, and T. N. Phillips

Two Barriers on Strong-Stability-Preserving Time Discretization Methods 211
Steven J. Ruuth and Raymond J. Spiteri

Higher Order May Be Better or May Not Be Better: Investigations with the FDEM (Finite Difference Element Method) 221
Willi Schönauer and Torsten Adolph

ADER: A High-Order Approach for Linear Hyperbolic Systems in 2D 231
T. Schwartzkopff, C. D. Munz, and E. F. Toro

Deferred Correction Methods for Initial Boundary Value Problems 241
Wendy Kress and Bertil Gustafsson

Application of Second Order TVD and WENO Schemes in Internal Aerodynamics 253
Jiří Fürst and Karel Kozel

Numerical Entropy Production on Shocks and Smooth Transitions 263
Gabriella Puppo

High-Order Algorithms for Large-Eddy Simulation of Incompressible Flows 273
R. Pasquetti and C. J. Xu

A Least-Squares Spectral Element Formulation for the Stokes Problem 285
M. M. J. Proot and M. I. Gerritsma

Analysis of a Discontinuous Least Squares Spectral Element Method 297
Marc I. Gerritsma and Michael M. J. Proot

Towards a Realization of a Wavelet Galerkin Method on Non-Trivial Domains 307
Stefano Berrone and Laurent Emmel

Spectral Polynomial Chaos Solutions of the Stochastic Advection Equation 319
M. Jardak, C.-H. Su, and G. E. Karniadakis

Semi-Implicit Spectral Element Atmospheric Model 339
S. J. Thomas and R. D. Loft

Computation of Nonlinear Backscattering Using a High-Order Numerical Method 351
G. Fibich, B. Ilan, and S. Tsynkov

A Pseudospectral Multi-Domain Method for the Incompressible Navier–Stokes Equations 365
P. Droll and M. Schäfer

On the Simulation of Unsteady Flow of an Oldroyd-B Fluid by Spectral Methods 375
Alexei Lozinski, Robert G. Owens, and Alfio Quarteroni

Adaptive Spectral Element Simulations of Thin Premixed Flame Sheet Deformations 385
Huiyu Feng and Catherine Mavriplis

A Numerical Investigation of High-Order Finite Elements for Problems of Elastoplasticity 397
A. Düster, A. Niggl, V. Nübel, and E. Rank

Long Time Behavior of the Perfectly Matched Layer Equations in Computational Electromagnetics 405
S. Abarbanel, D. Gottlieb, and J. S. Hesthaven

Stability Criteria for Finite Difference Approximations to Parabolic Systems—An Update 423
Moshe Goldberg and Anna Pidgirnyak

A Priori Convergence Theory for Reduced-Basis Approximations of Single-Parameter Elliptic Partial Differential Equations 437
Yvon Maday, Anthony T. Patera, and Gabriel Turinici

A Reduced-Basis Element Method 447
Yvon Maday and Einar M. Rønquist

Towards Reduced Basis Approaches in *ab initio* Electronic Structure Computations 461
Eric Cancès, Claude LeBris, Yvon Maday, and Gabriel Turinici

A Hierarchical 3-D Poisson Modified Fourier Solver by Domain Decomposition 471
Moshe Israeli, Elena Braverman, and Amir Averbuch

A Robust Multigrid Algorithm for the Simulation of a Yawed Flat Plate 481
Ruben S. Montero, Ignacio M. Llorente, and Manuel D. Salas

A Particle Method for the KdV Equation 491
Alina Chertock and Doron Levy

Absorbing Boundary Conditions of the Second Order for the Pseudospectral Chebyshev Methods for Wave Propagation 501
A. Gelb, Z. Jackiewicz, and B. D. Welfert

Doubling the Degree of Precision Without Doubling the Grid when Solving a Differential Equation with a Pseudo-Spectral Collocation Method 513
D. Dijkstra

A Modified Fourier–Galerkin Method for the Poisson and Helmholtz Equations 529
Ole F. Næss and Knut S. Eckhoff

Deferred Correction in Space and Time 541
Bertil Gustafsson and Lina Hemmingsson-Frändén

A Compact Higher Order Finite Difference Method for the Incompressible Navier–Stokes Equations 551
Arnim Brüger, Jonas Nilsson, and Wendy Kress

An *hp*-Analysis of the Local Discontinuous Galerkin Method for Diffusion Problems 561
Ilaria Perugia and Dominik Schötzau

A Spectral Element Projection Scheme for Incompressible Flow with Application to the Unsteady Axisymmetric Stokes Problem 573
Mejdi Azaiez

A Semi-Lagrangian Method for Turbulence Simulations Using Mixed Spectral Discretizations 585
Jin Xu, Dongbin Xiu, and George Em Karniadakis

High Resolution Relaxed Upwind Schemes in Gas Dynamics 599
H. Joachim Schroll

ADER: Arbitrary High Order Godunov Approach 609
V. A. Titarev and E. F. Toro

Application of a Spectral Element Method to Two-Dimensional Forward-Facing Step Flow 619
D. Wilhelm and L. Kleiser

FETI and FETI-DP Methods for Spectral and Mortar Spectral Elements: A Performance Comparison 629
Dan Stefanica

Steady Gap Flows by the Spectral and Mortar Element Method 639
D. Weill and M. O. Deville

Simulations of Time-Dependent Flows of Viscoelastic Fluids with Spectral Element Methods 649
Nicolas Fiétier and Michel O. Deville

Sparse Two-Scale FEM for Homogenization Problems 659
A.-M. Matache

Implementation of Generalized Finite Element Methods for Homogenization Problems 671
A. W. Rüegg

Numerical Simulation of the Sedimentation of Rigid Bodies in an Incompressible Viscous Fluid by Lagrange Multiplier/Fictitious Domain Methods Combined with the Taylor–Hood Finite Element Approximation 683
L. H. Juárez, R. Glowinski, and T. W. Pan

Generalization of the Spline Interpolation Based on the Principle of the Compact Schemes 695
Gennaro Coppola and Carlo Meola
